**UTAH OGM COAL PROGRAM MEETING NOTES**  
**FINAL**

---

A

**Date:** February 22, 2007  
**Time:** 11:00 am to Noon  
**Location:** A Conference Room

**To:** Internal File, Skyline Mine, C/007/0005

**From:** Pamela Grubaugh-Littig

**Attendees:** Canyon Fuel Company, LLC (Chris Hansen, Erik Petersen, Mark Bunnell, Mason Bishop, Gregg Galecki)  
DOGM (Wayne Hedberg, Wayne Western, Jerriann Ernstsens, Pamela Grubaugh-Littig)

**Purpose:** Discuss Future Expansion at Skyline Mine

---

**MEETING SUMMARY:**

The North Lease has changed the orientation of the longwall panels from N/S to E/W. CCF would like to expand the mine into fee coal/fee surface areas (owned by Liodakis and Allred) – the area would be about 1200 acres. CCF is scheduled to cross the permit boundary in January 2008. Currently, CCF is doing the additional water monitoring, seep and spring surveys were done in the 1990s (and were started again in the summer of 2006).

Both SUFCO and Skyline Mine are considering ventilation shafts.

**PROPOSED ACTION ITEMS:**

Due to the fact that more baseline information is needed for areas that are planned to be mined in 2009, it was decided that there should be two submittals:

The southern half (continuous miner and development work) is scheduled to be mined in January 2008. This application will be submitted soon.

The northern half is fee and Forest Service and is scheduled to be mined in 2009. More baseline information is being acquired and will be submitted later.

They will conduct TE and archeology studies for the areas of surface disturbance associated with the shaft and areas not currently permitted. Information on the shaft may be submitted with the second submittal so they don't "piecemeal" the NEPA process.
